AIR DISTRIBUTION

Air distribution solutions focused on deliberating precise airflow, effective ventilation, and overall system efficiency. Products include fans, louvers, dampers, terminal units, grilles, registers, diffusers, and specialty air devices designed to support proper air mixing, noise control, and code-compliant ventilation strategies.

ARCHITECTURAL PRODUCTS

Architectural airside products that integrate performance with aesthetics and building design requirements. This includes louvers, penthouses, screens, and custom enclosures engineered for weather protection, intake/exhaust performance, and visual integration with the building facade.

APPLIED EQUIPMENT

Engineered HVAC equipment designed to meet complex project requirements and system-level performance goals. Equipment offerings include DOAS units, energy recovery systems, VRF, custom air handlers, packaged roof top units, split systems, computer room units, and specialty systems for critical environments.

BUILDING AUTOMATION & CONTROLS

Integrated control solutions that provide system-level visibility, optimization, and long-term operational reliability. This includes building automation systems, airflow measurement, gas detection, laboratory and critical environment controls.
